Act Before Performance Suffers

Identify problems in preproduction

As enterprises continue to evolve, the number of business-critical applications increases, and the environments they run in grow in complexity, resulting in a monitoring challenge. 68% of enterprises are using up to five monitoring tools for the digital workspace. Yet, the most common complaint is that applications do not launch properly or run slowly, resulting in a poor user experience.

Gartner said, "Testing is the new monitoring."* Smart CIOs know that monitoring desktop and application performance in the enterprise without pre-testing is like playing Russian Roulette: it's a matter of when, not if.

Give the Business What it Wants

Resolve problems before they impact the business

There is a major disconnect between what infrastructure and operations (I&O) teams monitor and what the business cares about – resolving performance problems before they impact the business.

To improve business outcomes and user experience, I&O leaders must evolve from reactive, component-based monitoring to a holistic, pro-active testing approach.

Monitoring is reactive. Testing is proactive. Testing expands your safety net and catches failures before they affect production. Automated testing:

- Goes beyond the question "is it working?" to "is the business running properly?"
- Closes the gap between user experience and business objectives
- Validates the uptime and effectiveness of your business-critical apps, 24/7
- Greatly reduces the cost of a failure and its fix when not in production

Test with Login Enterprise

Maximize the end-user experience for all digital workspaces

Login Enterprise is an automated testing platform that predicts performance, ensures business continuity, and reduces risk. Login Enterprise tests the desktop and applications as a whole, from preproduction to production. An optimal end-user experience is a critical success factor for all SBC, VDI, and DaaS deployments.

Login Enterprise is the market leader in synthetic testing and offers a complete software solution to maximize and safeguard the performance, scalability, and availability of applications and virtual desktop environments, including the cloud. Login VSI is 100% vendor-independent and used in VMware Horizon, Citrix Virtual Apps and Desktops, Microsoft Remote Desktop Services (RDS), and Azure Virtual Desktop.

Login Enterprise Benefits

Login Enterprise maximizes the end-user experience for all digital workspaces, eliminating poor application performance and downtime, delivering the following benefits to the enterprise:

Accelerate Time to Market: Move changes and new releases into production faster

Reduce Risk: Eliminate uncertainty and disruption of business services

Decrease Cost: Improve problem remediation and eliminate overspending

Quick Time to Value: The software includes many popular application workload templates

5 Primary Use Cases

VDI PLANNING

Test your new environment

VDI/DAAS MIGRATION

Test before your migration

EUC CHANGE TESTING

Test your patches before deployment

END-USER EXPERIENCE

Test continuously in production

SLA REPORTING

Test your MSP performance
